

Woven Ground Cover

Step by Step Guide

Product Information

A black UV stable 100g woven material, specially designed as a high performance porous, breathable weed suppressant membrane for heavy duty applications such as under gravel, slate, bark and under path ways.

Woven fabric has 5x the tensile strength of an equal weight spun bonded fabric. Blocks 99% of light transmission to the soil.

It's open woven design lets water and nutrients through to your plants whilst suppressing the growth of weeds etc.

Keeps the ground moist and protects from extreme temperatures.

Ideal for under decking, pathways and patios, and can be finished with bark, mulch, light weight gravel or slate, or light patio slabs.

Step One

Prepare the ground, remove any stones and make sure the area is free from weeds. Rake the soil to a smooth surface

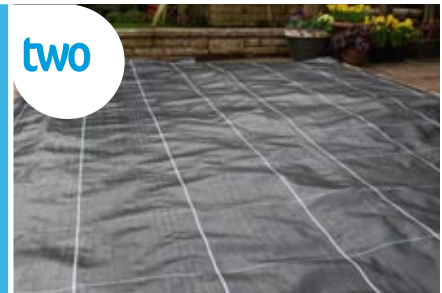

one

Step Two

Roll out the Ground Cover membrane over the area and cut to size. For large areas please ensure that these is a 75mm (3") overlap. Secure any overlaps with ground pegs.

two

Step Three

For new plants, cut a cross in the material and pin back where you intend to place the plant. Dig out the soil below and prepare the ground as instructed. Return the ground cover as close to the base of the plant as possible.

three

Step Four

Cover with at least 50mm (2") of gravel or mulch, or place 50mm of compacted sand on top to lay patio slabs.
