

Weed Control Fabric

Step by Step Guide

Product Information

A black UV stable nonwoven material, specially designed as a porous, breathable weed suppressant membrane for use under organic mulch, decorative gravel, bark or for lining planters.

It lets water and nutrients through to your plants whilst suppressing the growth of weeds etc.

Keeps the ground moist and protects from extreme temperatures, whilst reducing the need for watering of plants.

Ideal for borders, flower beds, under decking and gravel paths. Can be finished with bark, mulch, light weight gravel or slate.

Step One

Prepare the ground, remove any stones and make sure the area is free from weeds. Rake the soil to a smooth surface.

one

Step Two

Roll out the Weed Control membrane over the area & cut to size. For large areas please ensure that there is a 75mm (3") overlap.

Secure any overlaps with ground pegs.

two

Step Three

For new plants, cut a cross in the material and pin back where you intend to place the plant. Dig out the soil below and prepare the ground as instructed. Return the Weed Control as close to the base of the plant as possible.

three

Step Four

Cover with at least 50mm (2") of bark or mulch.

The fabric can be cut around existing plants, shrubs or trees and underneath hedges.
